

User Survey Questions

1. Which age group do you fall under?
2. Are you currently either a university student or high school student?
3. How would you rate yourself on knowledge of COVID-19?
4. How do you currently inform yourself about COVID-19?
5. How would you prefer to receive information about COVID-19?
6. Have you seen a COVID-19 particle before? (Image example)
7. How would you rate yourself on knowledge of overall vaccinations / viruses?
8. How would you rate yourself on knowledge of COVID mutations / variants?
9. Would you be interested in using an Augmented Reality app to learn more about COVID-19 variations and baseline virus information?

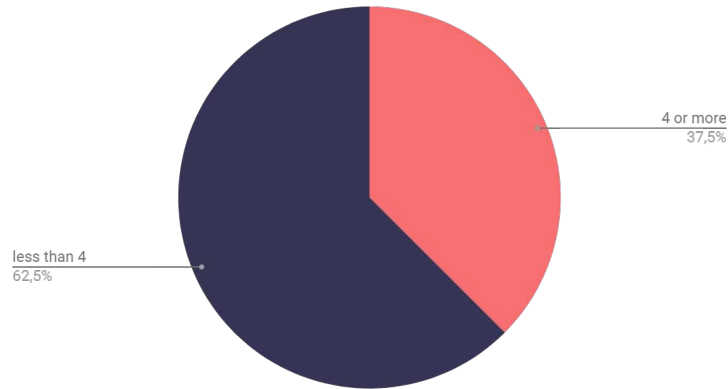

Knowledge of COVID:

University students rate their knowledge of COVID higher than high school students

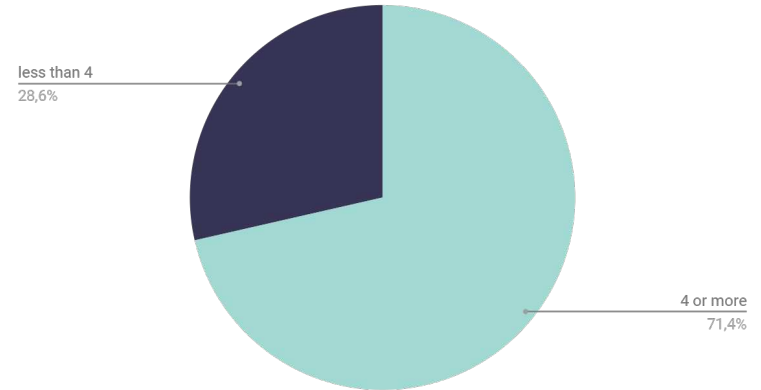

High School

High School

3 out of 8 rated their knowledge as a 4 or more

University

University

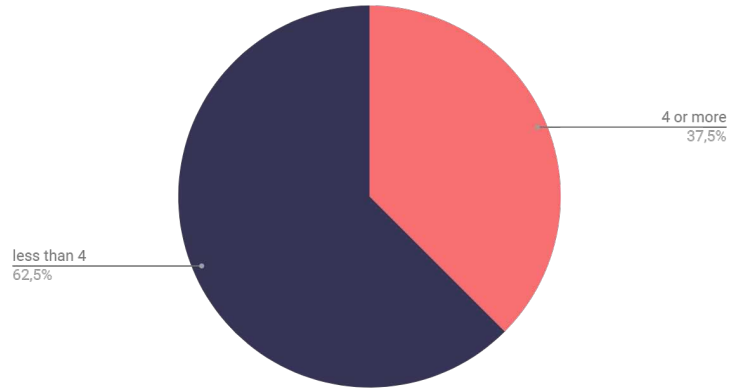

10 out of 14 rated their knowledge as a 4 or more

Knowledge of Mutations:

High school students rate their knowledge of mutations higher than university students

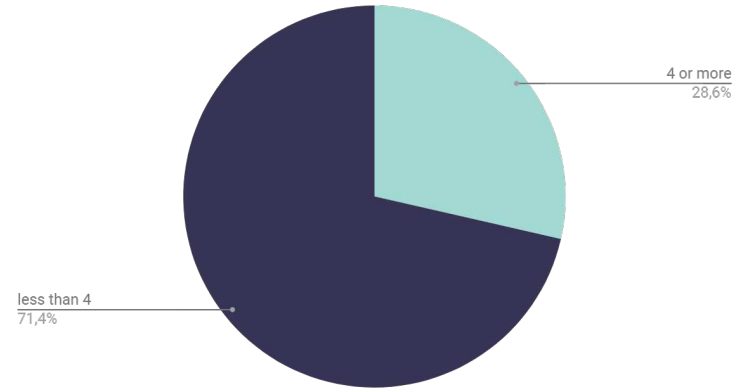

High School

High School

3 out of 8 rated their knowledge as a 4 or more

University

University

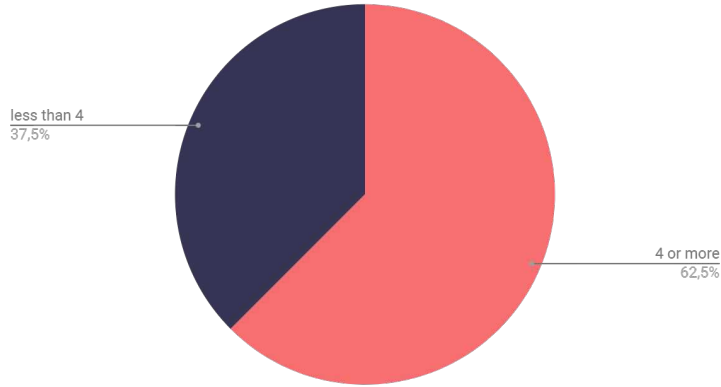

4 out of 14 rated their knowledge as a 4 or more

Knowledge of Vaccines:

University students rate their knowledge of vaccines slightly higher than high school students

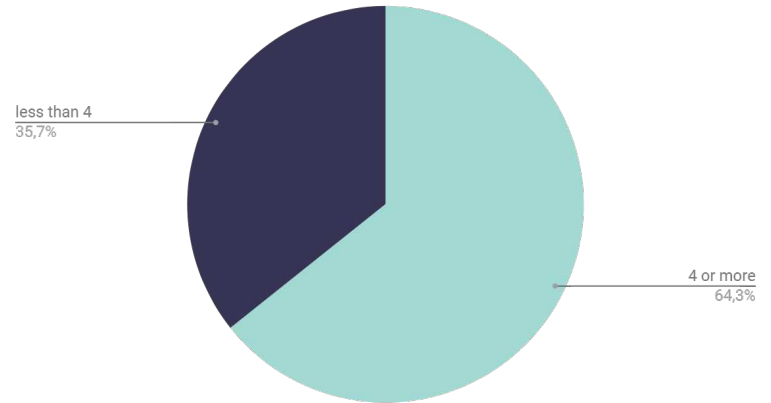

High School

High School

5 out of 8 rated their knowledge as a 4 or more

University

University

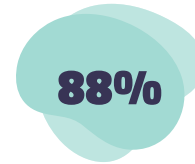

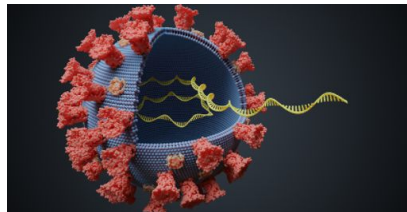

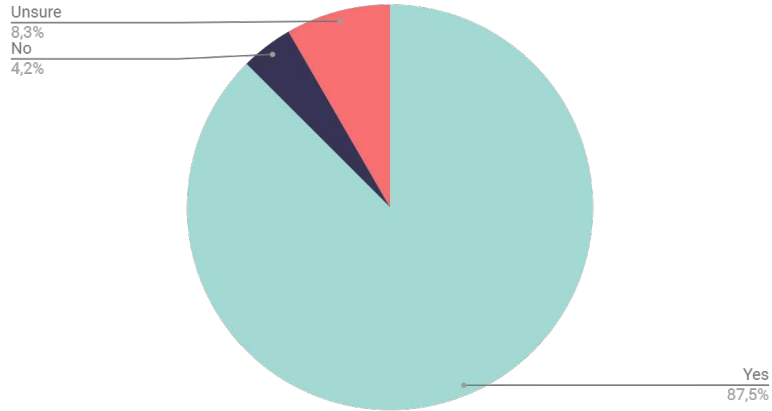

9 out of 14 rated their knowledge as a 4 or more

COVID Particle

The majority of participants have seen a COVID-19 particle before

Have you seen a COVID-19 Particle Before?

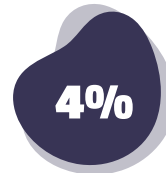

Have Seen Before

21 out of 24

Unsure

2 out of 24

Have Not Seen Before

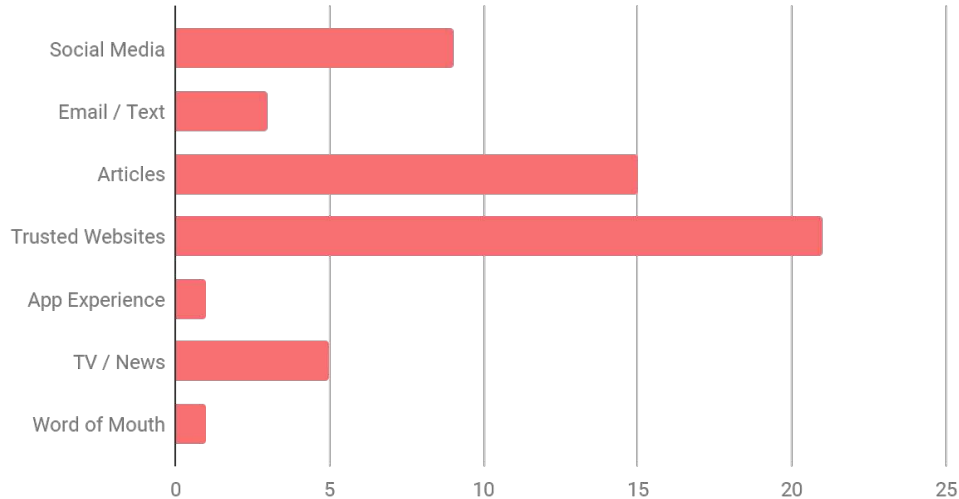

1 out of 24

COVID-19 Information Preference

Trusted websites are the most preferred medium for COVID-19 websites.

How would you prefer to receive information about COVID-19?

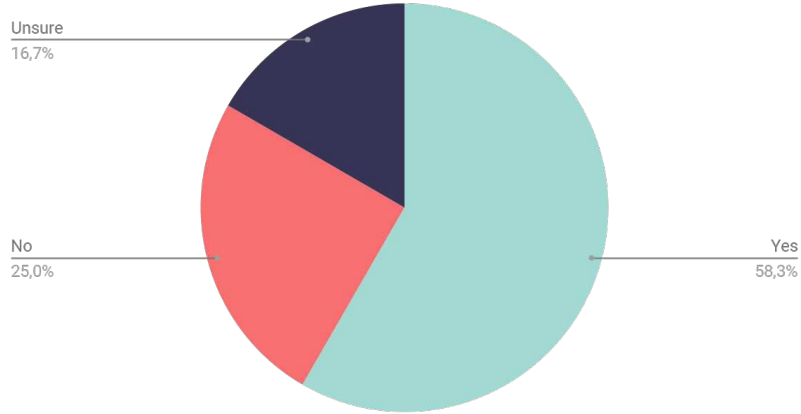

AR Interest

The majority of participants are interested in an AR app to learn more about COVID variations and baseline virus information.

Would you be interested in using an Augmented Reality app to learn more about COVID-19 variations and baseline virus information?

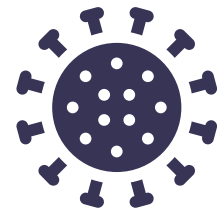

75%

High School
6 out of 8 said yes

50%

University
7 out of 14 said yes

Key Findings

1. The majority of participants were 13 - 18 years old
2. There were 14 University Students, 8 High School Students, and 2 were neither
3. On a 5 point scale, participants tended to rate themselves a 4 on COVID knowledge level
4. The majority of participants do not actively pursue COVID information
5. The majority of participants prefer trusted websites for information
6. The majority of participants have seen a COVID particle before
7. On a 5 point scale, participants tended to rate themselves a 3 or 4 on vaccine/virus knowledge
8. On a 5 point scale, participants tended to rate themselves a 3 or 4 on COVID mutation knowledge
9. The majority of participants would be interested in using a AR experience for COVID variation and baseline virus information
